# **WEATHER OF CONCERN**

## **Weather of Concern**

- A cold front will bring rain Thursday through Friday morning. Highest rain amounts will be in Del Norte County with much lighter amounts expected for southern Mendocino County. A few inches of snow is expected above 5000 feet by Friday.
- The first major snow event of the season begins tomorrow night in the Sierra. A Winter Weather Advisory has been issued for portions of the Sierra. Strong winds, blowing snow, & slick roads will create hazardous travel conditions tomorrow night into Friday!

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

\*\*\* Increasing S-SW winds Shasta Valley and E of the Crest this afternoon \*\*\*

Thursday, the low pressure system will reach the region and increase cloud cover, humidity and S-SW winds. Wind-prone areas will see gusts reach 40-60 mph, but with Relative Humidity (RH) climbing to 30-40% by early afternoon. Widespread light to moderate rain is possible later today through Friday north of a line from Clear Lake to Lake Tahoe. Areas as far south as Marin County may see some measurable rain of a few hundredths. Another low pressure system will bring rain to far NW CA on Saturday while the remainder of the region begins to dry out. A significant warming and drying trend is expected following the trough passage late weekend and lasting into the following week. Strengthening northerly winds will be possible early next week.

## **SOUTHERN CALIFORNIA**

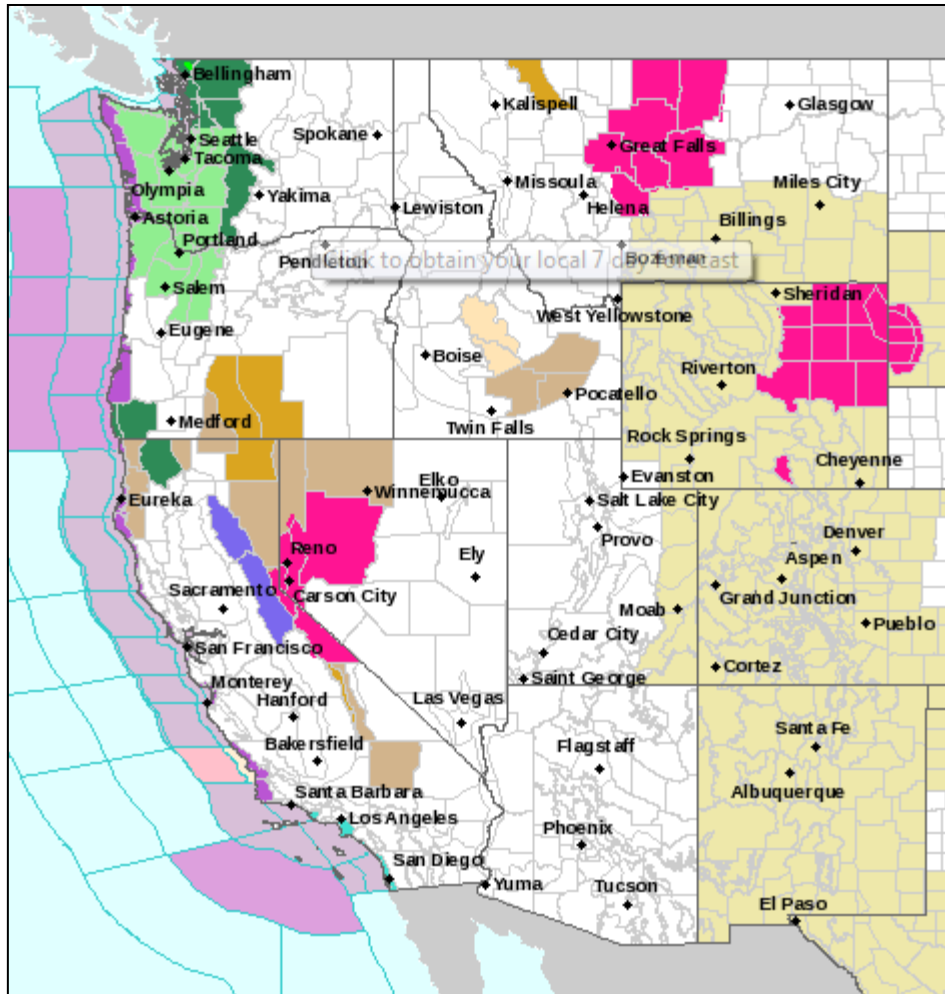

\*\*\*Cooling trend through Friday \*\*\*

\*\*\*Hot, dry and breezy over the weekend into early next week\*\*\*

Cooler weather is expected over the next few days as a sizable trough moves into the Pacific Northwest. The main front associated with the trough will move inland today, bringing a good chance of wetting rain for much of the northern part of the state. The trough will reach the district Thursday night into Friday. Most of the moisture will remain to our north, but light wetting rains will be possible across the Monterey Peninsula and in the Sierras from Yosemite N.P. northward. West winds of 20-30 mph with gusts to 40 mph will develop Thursday afternoon and again Friday in and near the Antelope Valley and the Banning Pass. Highs will drop to near normal readings by Friday with widespread marine layer stratus returning to the coast during the night and morning hours. The cool weather will be short-lived as a strong warming trend will begin over the weekend which will continue into the first half of next week. A strong ridge along with weak offshore flow will generate record high temperatures across much of Southern California Sunday through next Tuesday. This ridge looks to be exceptionally amplified for this time of year and the entire district should see temperatures 10-20 degrees above normal. Highs will reach the lower 90s across the valleys and lower foothills of Central California with readings over 100 over Southern California west of the mountains. Very hot weather will extend all the way to the coast as no marine layer will be present to mollify temperatures by Sunday. At this time, the offshore winds do not appear to be strong, but northeast winds of 15-25 mph will be possible Sunday and again next Tuesday. Minimum RH will fall into the single digits with poor recovery over most areas. Cooler weather may slowly return next Thursday.
